

ADVANCEMENTS IN PERI-IMPLANT PLASTIC SURGERY:

Addressing Complications for Enhanced Esthetics and Function

Friday July 12, – Saturday July 13, 2024

Leandro Chambrone

Alfonso Gil

Homa H. Zadeh

Lorenzo Tavelli

The utilization of peri-implant plastic surgery is on the rise, offering effective solutions for addressing esthetic, functional, and other complications associated with dental implants. These oral plastic surgical interventions extend beyond mere esthetic enhancements, playing a pivotal role in the long-term stability of peri-implant tissues. At this educational event, distinguished experts will converge to present the latest evidence-based approaches for managing peri-implant esthetic and functional complications.

What sets this program apart is the diverse array of approaches that these seasoned clinician-educators bring to the table, enriching the educational experience. Participants can anticipate a comprehensive program comprising lectures and hands-on workshops, ensuring they take home not only with cutting-edge evidence-based knowledge but also with practical skills that will significantly augment their clinical expertise.

Educational Objectives:

By the end of this event, participants will possess both theoretical knowledge and practical experience in the following key areas:

- Understanding the critical role of peri-implant mucosal phenotype in ensuring long-term tissue stability.

- Discerning when soft tissue augmentation becomes imperative through informed decision-making.
- Determining the need for bone and/or soft tissue augmentation to address peri-implant defects
- Selecting the most appropriate technique, materials, and protocols for successful interventions.
- Navigating prosthetic considerations in enhancing peri-implant plastic surgery.
- Integrating various phases of therapy cohesively to optimize patient outcomes.

Tuition:

- \$1995 Live in-Person: Lecture + Workshop
- \$1495 Remote Learning: Lecture + Workshop
- \$995 Remote Learning: Lectures Only

Friday July 12, 2024

Pacific Time	Speaker	Topic, event description
7:30-8:00	Registration, breakfast and exhibits	
8:00-10:00	Leandro Chambrone	Clinical Insights About Soft Tissue Peri-Implant Phenotype Modification: The Flap, The Graft and the Surgery
10:00-10:30	Break and exhibits	
10:30-12:30	Lorenzo Tavelli	Peri-implant esthetic complications and their management.
12:30-1:30	Lunch	
1:30-3:30	Leandro Chambrone	Hands-on workshop: Soft tissue grafts for the prevention and management of alveolar ridge deformities
3:30-4:00		
4:00-6:00	Lorenzo Tavelli	Hands-on workshop: Peri-implant esthetic complications and their management.

Saturday July 13, 2024

7:30-8:00	Registration, breakfast and exhibits	
8:00-10:00	Homa Zadeh	Decision tree for the management of peri-implant mucosal and osseous defects
10:00-10:30	Break and exhibits	
10:30-12:30	Alfonso Gil	Optimizing Extraction Socket Management: The Significance of Soft Tissue Considerations
12:30-1:30	Lunch	
1:30-3:30	Alfonso Gil	Hands-on workshop: Soft tissue management in the treatment of extraction sockets-immediate and delayed implants
3:30-4:00		
4:00-6:00	Homa Zadeh	Hands-on workshop: Combined management of peri-implant mucosal and osseous defects with VISTA
