

A Systematic Approach to Molar Endodontics - Lectures and Hands-On Workshop

April 6-7, 2024

Course Faculty:

**Anthony Tran, Jaydeep Talim,
Khalid AlHezaimi**

Scientific Advisor: Ilan Rotstein

Course Overview

Molar endodontics can present clinical challenges to the dental practitioner. However, advances in biology, technology, materials, and techniques, have significantly improved the efficiency and predictability of root canal treatment. This Continuing Education course is designed for dental professionals seeking to enhance their expertise in performing molar endodontic treatment. The two-day comprehensive evidence-based course combines in-depth lectures with hands-on workshop to provide participants with the knowledge, skills, and confidence to perform root canal treatment in molar teeth with more predictable results and greater patient satisfaction. By the end of this course, attendees will gain additional insights and practical experience to treat molar endodontic cases with higher success rate.

Topics to be Covered

- Root canal anatomy of molar teeth.
- Current concepts of endodontic access.
- Cleaning and shaping of molar root canals.
- Nickel Titanium rotary instrumentation.
- Root canal irrigation.
- Root canal obturation.
- Soften gutta-percha techniques.
- Endodontic sealers.
- Procedural errors and how to prevent them.

Tuition

\$1995 (before February 1, 2024)

\$2295 (after February 1, 2024)

Educational Objectives

At the conclusion of this course, participants should be able to:

1. Amplify their knowledge and clinical concepts of molar endodontics.
2. Apply advanced instrumentation and irrigation techniques to treat molar endodontic cases.
3. Successfully treat maxillary and mandibular molars.
4. Handle molar endodontic cases with more confidence ensuring predictable results.
